

Internet delivered TV content is an exciting paradigm now developing - giving consumers more choices, HD quality and available for TVs, computers and mobile devices - right from your high-speed internet connection.

It is really quite simple!

Step 1 - Browse and select the performances and images you wish to enjoy from the Artistes du Globe web site. Search by genre, artist, country, style. Create favorites. Your selections will download the rights-protected files to your PC which has the free Artistes du Globe software.

Step 2 - Your PC becomes the media gateway delivering music, video and pictures throughout the home or office to other PCs, mobile devices and image displays.

The Artistes du Globe software communicates with our system to manage the content, decryption and your home media devices.

Step 3 - If your TV is Internet ready, simply use your remote control to the address of the PC with the performance and enjoy.

Home networking devices such as Home-Plug allow you to stream HD content from your PC to the TV or Internet Box (if your TV is not Internet ready) right across the electrical lines - no new wires!

Home-Plug Adapter streams content from the PC across the existing electrical or phone lines. If your TV is not internet ready, small low cost and attractive devices can do the job.

The Art of Making the Difference
